Pedromdrp had to prove you guys wrong..

pits topic

he was PMing people with links to his creation which i dont like to say works

like i said before its been over a yr now..sumone will figure it out..but no you guys :rolleyes:

KIRBY098Quite frankly, anyone who believes ANYTHING edro has to say ought to be shot....

Well it's not about what he says anymore. Vegeta and others tested it, and it worked at least somehow.

Majiin Vegetauses microsofts .net framework

family of operating systems. It is the foundation of the next generation of Windows-based applications that are easier to build, deploy, and integrate with other networked systems.

Most consumers will never notice that the .NET Framework is running on their Pocket PC, smartphone, or desktop computer. But they may appreciate the reliability, ease of use, and ability to connect to other systems that the .NET Framework helps bring to computers.

The .NET Framework helps software developers and systems administrators more easily build and maintain systems with improvements toward performance, security, and reliability. Here's how.

A New Approach to Building Windows Software

The .NET Framework simplifies Windows software development. It provides developers with a

skills to develop software for a variety of systems ranging from handheld smartphones to large server installations.

Software built on the .NET Framework can be easier to deploy and maintain than conventional software. Applications can be designed to automatically upgrade themselves to the latest version. The .NET Framework can also minimize conflicts between applications by helping incompatible software components coexist."

:rolleyes:

umm crimson the WSE or the pedro one?

let us know how it goes

The WSE one is a clickbot and it's 99% useless. We'll be testing the pedro one.
