Argh. Computers, I hate them! Alright, ever since Ive done diskcleanup and disk defrag. my internet explorer is being really crazy. Sites that used to work no longer work (all geocity sites I believe don't work.) When I try to visit sites like for ex: <http://www.geocities.com> itll bring up a box that says Internet Explorer cannot download from <http://www.geocities.com> this website is either unaccessible or cannot be reached.....but my friends can get to the site fine. Argh! Anyones help would be GREATLY appreciated! Ive tried writing Microsoft but of course they are too busy trying to take over the world to care about my petty problems.....Thanks! Bye

Hmm... I had a slightly similar experiance. I defraged two days ago, and when I went into IE, I had several favourites which weren't there before.

In all seriousness though, take a look at your internet security and other settings. It's entirely possible they reset to their defaults.
