This is a n00bish question, but how do I defrag my computer, I have never defragged it yet, and recently it has been acting a bit slow, and i was wondering if that might fix it, this isn't a problem with renegade , its just that my computer is acting slow.

Open up my computer right click on your harddrive and go to properties click the tools tab and it should be there.

also, u may want to do the disk cleanup which is on the general tab, clean out the temp files with that

im running with a tnt2 card, so 12 fps is a good day for my comp

Click on my computer, go in program files, and click once on windows, and press on the delete key. Which also stands for defragmenting by the way.

Cowgomoo

im running with a tnt2 card, so 12 fps is a good day for my comp

Same here, but I get in the 20's, so HAH!

(OT: 300th post, go me)
