Thank YSLMuffins for this, it works.....

BkckEyesU]  
Delete your HOSTS file?

Search for it on your computer...HOSTS, no extension.

Mine was under the Windows folder. (I'm running on Windows 98 so it might be differant for a few of you guys).

BkckEyesUgee that really helps, whats the files name dumbass :rolleyes: give me the exact name not what u call it

:rolleyes:

HOSTS (or hosts in my case, if you want to be picky about how it's exactly spelled) is the filename.... As it says in the qoute above, there's no extension, so it's not like HOSTS.txt or anything, just HOSTS . Do a search in your Windows directory or look yourself, that's the file name.
