On playing the flying maps when I get like an apache or an orca I can gain the altitude really quick but I can't figure out how to land the thing. Does anybody know how to land an aircraft? OK let the joking begin. First one is I've fallen up and can't get down.

Space bar increases altitute, C lowers altitude. Mind you, those are the defaults, so if you haven't tinkered with any control configurations, then that's how you do it. If anyone tells you E lowers altitude, well, they're just trying to trick you; E takes you back to the purchase terminal.

that's a polite way of saying 'E' exits the aricraft, you fall, you die, you respawn saying DOH!

I tried to press the E before and Unfortunately I ended up grabbing some kids knap sack instead of a parachute. If "C" is the crouch key then I've already tried it and I've not had much luck. I have changed the bind to "z" becuase I couldn't bind it to Ctrl.
