I was looking through some old computer game magazines when I ran across an issue of the now dead PC Accelerator. I saw that they had a whole page or 2 about C&C Renegade. What surprised me in that article was what they said about the graphics, and I quote,

"The graphics in Renegade are going to be amazing, they may even be good enough to challenge Bungies' Halo."

Now I remind you that this is when Halo was being made for the PC before it switched over to the XBox. Could it have been possible for Ren's graphics to be as good or better than Halo?

I remember Renegade's physics engine being hyped, but never the graphics...

The graphics for renegade is not as good as the gameplay,
have you ever seen the characters hands in the clips in SP??????
They suck really bad
