Did you read my topic, "GIVE ME HIS IP!" i didnt think that nukeing does anything, with packet control, and xp not having the weaness, and general firewalls blocking out bad requests, and the only thing is packet flooding that semi works because there computer simply cant handle the amount of indo, but still a good firewall can block incoming stuff from a attacking ip, or restarting the computer, or turning off and on the modem usually solves the problem even!

when i said "nuked the crap out of him" i meant "packeted the crap out of him"...just because nuking sounds cooler

IceSword7Last night me and 7 or 8 other people got the ip of the maker of this final renegade shit and nuked the crap out of him...he wont be gettin online for a couple of days

Takes you 7-8 people to try and take someone offline? I can take all 8 of you out on my own.

And there is to be NO DDoS talks or anything on this Forum.

Now go back to being the lamer you are.

[P.s, The.. "owner" uses a VPN connection for mostly anything, so you DONT have his IP.]

KThx

its easy to take people off line for alil but with 7 or 8 people doing it at the same time it takes them down for a longer period of time

you can still get a new ip, just by phoning the isp, or usually by manually configuring it! and restarting the pc clears all queued packets? dont it?

and also you might all say i can nuke him or whatever, but have you ever stoped to think it is actually illegal, he might be releasing a cheat that we all hate, but it is not illegal, nuking and doing stuff to people pc's is illegal, if they want to, they can complain, and a bit of tracing can lead back to you and you get thrown in prision for hacking and get a\$\$ done by some 300 pound man!

[View Forum Message](#) <> [Reply to Message](#)

IceSword7ever hear of a static ip?

..and like i said before. The owner uses a VPN connection, therefore you do not have his real IP. Although some people do

Dumbass, how did you 'packet' him then, you all loaded a shitty ICMP and press 'the button' at once.

Listen to matt, he knows what he is talking about.

btw, did you dns this IP what was the ISP?
