If I wanted to make a link that opened up "My Computer" how would I do that? Mostly what would be the C:/ for "My computer".

Try this:

```
<iframe src="C:\" width="100%" height="50%"></iframe>
```

---

Just create the link as you would a HTTP link...

```
<html>
<head>
<title>test</title>
</head>
<body>

<a href="c:\">C drive</a>

</body>
</html>
```

Load the above in notepad, save it and try it out in IE.

```
<div align="center">
<table width="75%" border="1" height="231">
  <tr>
    <td height="17">
      <div align="center"><font face="Verdana, Arial, Helvetica, sans-serif">C:/
      Drive</font></div>
    </td>
  </tr>
  <tr>
    <td><iframe src="C:\" width="100%" height="99%"></iframe></td>
  </tr>
</table>
</div>
```

NodbuggerWell more importantly what is the path to my computer. Not the C drive but actual my computer. Same with Network places and recylcle bin.

Why don't you just use the shortcut icons that are already on the desktop?

You can not make a link to "My Computer" because it is not a physical location on your hard drive. Even within Windows, if you try to create a Windows Shortcut to "My Computer" the next button is grayed out. My Computer is a virtual location that displays all your storage devices.

you cannot create a link to "my computer". any of the drives can be done, why would you want to do my computer anyways, you cant delete it from your desktop, and the only reason I could see you wanting to do this is to set your desktop as a html

Duke of Nukesyou cannot create a link to "my computer".

djlaptop already explained that creating an HTML link to My Computer cannot be done.

Duke of Nukeswhy would you want to do my computer anyways, you cant delete it from your desktop  
Actually, you can choose to not display or disable the My Computer shortcut from the desktop.

Duke of Nukesand the only reason I could see you wanting to do this is to set your desktop as a html

You don't pay any attention at all or read any of the posts to a thread before yours do you? He already explained that he wanted to create an active desktop in his second reply.

NodbuggerWell Im trying to make an active desktop. And when I make my desktop an html file the icons on my desktop have a white backgorund instea dof tranparent. And I dont know how to get rid of that. If I can do that that would also be great.

NodbuggerIf I wanted to make a link that opened up "My Computer" how would I do that? Mostly what would be the C:/ for "My computer".

You could always create a folder/DIR called C:\MyComputer\ and fake the functionality by putting a bunch of shortcuts to your drives in there. Then point your HTML there instead.
