how do you make it play?
i clak the link and it downloads a file which opens my dvd player which tells me to make a play list of stuff on my drive, no internet stuff

Use Realplayer, Windows Media Player, or winamp instead.

Just download the .pls file (which connects to n00bstories radio) and double click it.

It should then play in RealOne, or whatever player you're using.

BTW, because it opens the wrong program for you, right click it and select 'open with' then choose a program that can play it (RealOne, Winamp, etc').
