hi,

i want to know if this is right, cause its not workin at all

```
<?php include ("poll/poll.php"); ?>
```

just try

```
<?php include './poll/poll.php' ?>
```

if that doesn't work, look at where it is looking at for the file in the error message, and adjust your './poll/poll.php' accordingly

thx

i didnt try that, i asked another guy before u reply and he said:

```
<div align="left">  
<?php include ("poll/poll.php") ?>  
</div>
```

and it worked

yeah, php process the directory odd, you do ./ and it might go to 2 root folders down, while / will do 1, while the standard is / is web root, and ./ is current directory...
