Sorry about the outage earlier. Yet again the attack was completely unprovoked. I played around with the firewall settings and TCP/IP settings and managed to shrug it off. I thought I wasn't going to be able to, but some setting reverted back to what it was before and once I fixed that the attack went away. In fact, it's still going on as I post this.

The source IPs are spoofed, so if you looked at the IPs hitting me, you'd say every single computer on the internet is attacking me.

I know who's attacking, too, and if you don't tell me what you know, you'll quickly find yourself banned.
