Sounds like you installed it to you Renegade directory. You have to install it to a different location. Otherwise that happens

RenAlert is not a mod, it is an expansion pack so your's be a fool to install it tou your renegade directory.

I uninstalled RenAlert, then tried reinstalling it, and it said error writing to temporary folder, or something along those line, no I didn't install it to my Renegade directory.

spreegeml uninstalled RenAlert, then tried reinstalling it, and it said error writing to temporary folder, or something along those line, no I didn't install it to my Renegade directory.

Yeah that happend me also when I downloaded the file and was trying to install it.

Then I went back to fileplanet and download from link 2 instead and it works good now
