They released the Renegade 2 models that Westwood made before closing. Someone should make them d/lable models so that they cane replace teh renegade tanks. Like the grizzly could replace the Medium tank.

These models have been out for nearly a year. I don't know if they just discovered them, or just re-releasing them to spark some interest.

Few of those models will actually work in Renegade, the polygon count for the airship blimp thing is in the 9000's. The renegade 2 engine would have been just as good as the Chrome engine, handling high polygon count.

If they released all of the renegade 2 source code, i would have finished it all off with pleasure, and im sure lots of u would too
