I just tried to log into WOL and it said that "installed version of WOL was incompatible with this product" and told me to reinstall it. How do I install WOL without having to uninstall and reinstall the whole thing again?

Put the CD in, run the installer, and just select "Install Westwood Online Components".

He missed a step.

1). Uninstall Renegade

(Be sure to remove maps/skins/mods.)

2). Select Renegade & WOL.

3). Install

Well I tried doing that again and I guess I did something wrong the first time but if you use the install on the data disk it starts the install and I got WOL up and running again

By uninstalling first you can run into major problems like no words. So it's good to use the setup

on the data disk and it will look like your starting ren but you cans end the movie. then it will go to the install wizerd.

And as to what causes this. I find that patching tiberian sun with renegade installed causes this error for me
