Everytime I place an armor/health and some sniper rifle spawns in commando, they never seem to appear in the game when I test it.

I have tried several of the different types of spawners for each and I always get the same results. What are the names of the spawners that I place in commando?

Are you turning on "Spawn Weapons" in the hosting options?

I forgot to do that once, got really pissed off that they weren't working :oops:
