I just downloaded and installed the brenbot yesterday.

this is what I have in my config file

```
#--Start Configuration-IRC-----
# Edit the information below for your setup.
# At least edit BotName and IrcChannel.
BotName = renwars1
BotFullName = BlazeRegulator/BRenBot 1.30 Win32
IrcServer = irc.black-cell.net
IrcPort = 6667
IrcChannel = #renwarz
#---Q/NickServ-----
# Enable auth via "Q" or "NickServ" below. Sample input is shown.
Qauth = 0
Qusername = renwars1
Qpassword = *****
# Note for NickServ auth you give the name of nickserv and the full ident string as example
NickServAuth = 1
NickServName = NickServ
NickServAuth = /msg nickserv identify *****
#--Windows or Linux-----
# BotMode MUST be "WIN32" for windows servers, or "LFDS" for Linux servers.
BotMode = WIN32
#--Remote Admin Settings-----
# The next 3 lines should be the same info that is in your server.ini
# Note: Although it says "Linux" its the same for Win32 :)
RenRemLinuxHost = 127.0.0.1
RenRemLinuxPort = 1601
RenRemLinuxPassword = *****
#--FDS Installation-----
# Verify these paths are correct with your Renegade installation.
# Note: FDSLogFilePath must end with the trailing slash (as example below)!!
# Note: Linux users use forward slashes (/) in your paths.
FDSConfigFile = C:\Westwood\RenegadeFDS\Server\Data\svrcfg_cnc.ini
FDSLogFilePath = C:\Westwood\RenegadeFDS\Server\
#--Miscellaneous Settings-----
# Every x minutes the bot will announce a random line from AutoAnnounceFile.
AutoAnnounceInterval = 600
# LadderLookup currently not working. Do not turn it on or it will hang the bot.
EnableLadderLookup = 0
# Set this to 0 or anything but 1 to disable voting.
VotingEnabled = 1
# How long people get to place votes. Default here is 60 seconds.
VotingPeriod = 60
```

```
# Set vehicle kick to 1 for Sniper servers
VehicleKick = 0
#--BR Configuration Files-----
# BR Config Files - You shouldn't have to change these names. You can still open them with
notepad.
AutoAnnounceFile = autoannounce.brf
Messagesfile = messages.brf
AdminsFile = admins.brf
MastersFile = masters.brf
KickLogFile = kicklog.brf
BanLogfile = banlog.brf
#--End Configuration-----
```

Is this right?

I cannot get it to connect to irc all it does is load up what looks the a black window and disappears.

I am running Win2000 in GSA mode.

Thanks for any help.

Instead of clicking on the bot from windows, run a cmd prompt (start, run, cmd.exe) and then cd to the directory where you installed brenbot (cd \brenbot_131), and then run it from there (brenbot). This way the window will not close and you can see the error message. Your config file looks fine to me, so lets see what the error message says.

no luck .. not any errors ...
when I type brenbot.exe after I get to its dir ... the top will say brenbot.exe and do as this picture stats .. but no irc connection

I have got to have done something wrong ..

Shut down any firewalls you have running and re-try it. Also be sure to type a random command after making changes or they won't work. example: type DIR

change the renrem port to 5000 in both your server.ini and brenbot.cfg see if that helps.

First of all, the IRC identifying thing is set wrong:
Note for Nickserv auth you give the name of nickserv and the full ident string as example
Nickservauth = 1
Nickservname = Nickserv
Nickservauth = /msg nickserv identify *****

Its supposed to be like this:

Note for Nickserv auth you give the name of nickserv and the full ident string as example

Nickservauth = 1

Nickservname = Nickserv

Nickservauth = identify *****

Autoannounce:

Every x minutes the bot will announce a random line from AutoAnnounceFile.

AutoAnnounceInterval = 120 # every 2 mins an msg comes by :)

Use port 4848 instead, that port has always worked for me

BTW, Ga(y)mespy uses alternate ports to connect fds to their networks if im not mistaken port 25301 and port 25300?

Maybe you havent set these ports in your firewall?

ok I tried all that .. and nothing.

Still stats the same .. guess brenbot just doesn't like me. or my server lol.

Im just wondering:

Is BRenBot working at your server now? And if yes >> what fixed it?

This seems to be a issue with the compiled exe file, and not with brenbot itself. brenbot gets executed. Not sure what causes it, but I think you would have a problem with ANY compiled perl exe file. Might be the os.

However, I have a workaround that worked on a win2000 box (running the exe does nothing).

Install Active Perl 5.8, available at
<http://downloads.activestate.com/ActivePerl/Windows/5.8/ActivePerl-5.8.3.809-MSWin32-x86.msi>

When I had that, my compiled exe file would run.

Try that.

Not sure exactly how to use that app, but after installing it on XP pro I still have the same problem.

Download the latest version of BRenBot (1.35 at time im writing this post)

<http://www.brenbot.com>

and read this:
