Try the program compatability wizard? Should be in Start Accessories then in here somewhere

Just to be sure, you do need to have .991 and .9915 both installed before you can install .992...
Just in case this applies here...

You only need .991 installed. You can patch .991 staight to .992 without the .915 update. Worked fine for me, I think it is a cummalative patch, or at least it should be.
