I'm sure I saw this somewhere, but !rank command doesnt work. When anybody types in !rank it says "the system cannot find the path specified". It's a gsa server and I read somewhere that a fix is in 1.31.

So I downloaded 1.31 and overwrote the old brenbot.exe, is it supposed to be the same size? Anywhoo I did that and nothing changed, so I made a new folder for 1.31 and copied the config over but still same problem.

The other thing is I'm being n00bish and can't figure out how to get admin in. Did I hear somewhere that []'s dont work so you have to enter in a partial name? and whats the difference between masters.brf and admins.brf?

From readme.txt

Quote:

masters.brf

This file is a list of SERVER OWNERS or ADMINISTRATORS. The persons in this list have the highest access. Do not put normal moderators in this file. Be sure not to put any spaces before or after the name, and put each name on a line by itself.

Quote:

admins.brf

This file is a list MODERATORS. Be sure to put only one name on each line, and do not have any spaces before or after the name.

Quote:

!rank displays rank (currently disabled)

its called 'readme' to let you know you should read it...
sigh

Mac,

You need to rename the file:

readme_and_dont_deleteme.txt
