I start up Brenbot, and it works fine and so does the FDS, but even though the bot is in IRC, commands still dont work. Can anyone help?

sounds like brenbot is unable to communicate with your FDS, OR it is not recognizing your channel permissions.

1. Does the bot see the F2/F3 chat messages and display them colorized (in IRC)?
   - If so, RenRem is working, see #2.
2. Are you +o or +v in the channel? Did the bot *see* you get +o or +v?
   - Sometimes the bot must be in the channel before you get +o or +v to take note that you are a channel op.
