Hi just installed renegade tools 2. I have gone thur the first level tutorial exatly 5 times and each time when I start level I fall right thru terrain "Im starting under it I think" when I test it in editor in first person cam I run around it no problem. Allso same happens with terrain made from hieght editor. I am placing a start spawner. I am setting the settings in gmax exactly as they are in tutorial that came with tools. Im not new to editing I use unreal editor and halflife's editor. The tutorial as got to be missing something can anyone help

Renegade isn't generating a proper *.thu file for the level you're making.

Make sure there's a C&C_YourLevelName.thu file in the data directory. If there isn't, try to reload it in-game.

well all I got is my mod .pkg file and I dont see anywhere in the editor to make a thu file. I had this editor like 1 year ago made a level and it was fine but it kept crashing "weak pc upgraded sense then" so I went back to unreal now I cant get it to work again. Before I did have the old tools.

As Aircraftkiller said -- It is a .thu file problem. Delete the file if it exists in the data directory. You can also try re-exporting the mod package from the Commando editor and see if that works for ya
