narrow-minded, ha! love the sinner, hate the sin. no one ever believes that's how I feel, so I don't care anymore. It's still how i feel, but I don't feel the need to explain myself to any more people than necessary. don't wanna believe me, fine, just don't go around saying shit like that. my belief of a marriage is STRICTLY beween a man and a woman. Nowhere in the Bible does it show a marriage between a man and another man, or woman with woman for that matter, to be acceptable. It even goes as far as saying that the church is Christ's BRIDE. Don't call me narrow-minded. There are plenty more narrow-minded people than i am. many believe that what they believe and only exactly what they believe is correct. What I believe in is correct, but you can have different opinions and views and be correct as well.

i do hate for when people lose respect for me, but i can't help my feelings. with all of the gay rights movements, i feel that it's my duty to put out there what i believe and stand firm. what's wrong in wanting a gay free world? to you, you may see it as racism, but it's far from that. im not discriminating against the people, im discriminating against the sin, the choice that they have made. they may not have chosen to be homosexual, but they made the choice to act upon that urge. as a consequence for it, they should not be able to have the same rights as a normal (man and woman) married couple. it's not a sin to be tempted, but it is a sin to indulge in it. im basically

against all who see it as what was intended to be, that it's okay to act upon that urge. athiests and non-believers have a harder time to see my point. believers may not approve of how im acting upon my belief and faith. i'm not going for approval, im setting out to let people know that I don't approve of it and as long as there's a fight, i will stand in the thick of it. i don't wish to lose people's respect for me, but i am not doing this for popularity. i could care less if the majority of the world feels that im a nusience(sp). i see the approval of homosexuals as deterioration of our standards. we used to see homosexuality as not acceptable, but now we're letting our opinions change because we don't wanna be "unfair". life is unfair, deal. if it were okay to be homoxexual, God would have created Adam and Steve, not Adam and Eve.

Edit: I changed the idea of "victory at all cost" because that sounded more extreme than my actual feelings.

i'll gladly take this discussion to a different section. religion is dangerous. i am not part of a religion, it's my faith. i have no restrictions on what i can and cannot believe. i can believe some things and be totally wrong, but no one is stopping me and saying that i can't believe that (unless it's one of few absolute truths that i have to believe in).

There are two extremes to this thread.

One is anti-homosexual, and that wallpaper is fucking hilarious.

The other is anti-ideals, as in "you can believe what you want so long as it seems normal to me."

You're both wrong, as if it really matters anyway.

My personal favorite.

Program: Bryce 3D, Photoshop
Notes: This one took me some time to do. I did most of the 2D work in Photoshop and ported it over to Bryce (which I recently obtained for my birthday). After some playing around...I stumbled upon the image that would lead to Alien Minds. Finishing touches were also done in Photoshop.

How does the icons background not being transparent have anything to do with whether it's a joke or not? Besides I could just set it to be transparent then copy a .zip several times and name is stuff like Speed Hack, Damage Hack ETC ETC ETC

kawolskythat cheat doesnt work online....no need to panic,,,,
That does work online, but makes you lagg to hell and it's impossible to do anything.

And how do I make the desktop icon background transparent, I can't figure it out, they used to be before I reinstalled windows but now they are not. THX

well...i was tryin to help somewhat defend you...so i guess nm then.

you go into Control Panel and then to System. Click on Advanced and in the first little selection area aka "Performance" and then click on settings. choose what's best for appearance and it'll automatically do that or select the show shadows under icons...it should be the second from the bottom on that list of checkboxes.

Actually, it does work, you go incredibly fast and can jump really high, not even the agt can hit you. Most of the time it gives you the zero bug, but if you use it with other cheats, that can be avoided. (me and a few other admins/mods did some testing)

So now we have another cheat to watch for until RG comes out...

It's your job as well as mine to know what cheats are out there so we can watch for them. Umbral wanted to see if it actually worked and i said i'd help him. Then we asked Crimson and she set up n00bsvr07(with a password) for us, then she joined too. Maybe Spreegem's cheat(lol) was installed on n00bsvr07 and that's why it worked.

I must say, that cheat is hella fun to screw around with. I completed two laps around City Flying in less than a minute with a hotwire, speeding past the Obelisk and turrets before they had a chance to hit me.

There is a disadvantage to it, however. A fall from any height can kill you, even from ramps.

This cheat seems very dangerous, but so far it only seems to work if the host has it as well. So I guess it can only be used for shits and giggles, nothing more.

WOW...Looks awesome!

I'm impressed by From Below; excellent work. Although I really do not like the white on that black symbol. It just looks too out of place with the reds, oranges, and yellows blended together. IMHO, either take the wite out, or blend the white with some other colors.

If I might ask, how did you achieve that fire effect?

Thanks. I really like it too. It turned out much better then I orginally thought it would.

I can mess around with that symbol and made it pure black and see how that looks and post an updated version.

How I made that fire. Hmm I'm such a tool I can't remember. I'll fiddle around with PS and figure out the excat steps I used. Once I figure out I'll post it up.

Subject: Wallpapers

Okay took me like 2 secs to figure out once I was back in PS.

1. Pick two colours red and yellow. Then go to Filters>Render>Clouds
2. Then go to Filters>Distort>Polar Coordinates;Polar to Rectangle.
3. Then go to Filters>Distort>Ripple; 50% Size=Small
4. Then go to Filters>Shear>Wrap Around. Then change the curve int he box to the desired shape of your flame.

You can change these values around as you please.

Ah, I thought it was something like that, but I'm too tired to attempt to open PS and fiddle. I could easily tell that polar coord was used, and I also thought you used the shear. I couldn't figure out

how you got from A to C, but now I see that the connecting B is the ripple effect.
Thanks for the info.
