I get through loading then all I can see is a flash of error:... then I can't read any faster to see what it is. Is there anyway to figure out whats wrong through a log or something else.

BTW my first time working with this bot program. I'm used to use BR.Net

This happens to me too, I've been able to solve it by typing a host MSG, creating an alternate shortcut to run it by, and waiting for someone to join before starting the bot.. thats been working for me.

It's okay now that problem was solved. next issue...

I have it running yet it is not communicating with the FDS.

I type:

!msg test

Nadda happens.

!pi

there are players in game and the responce I get in

No players Ingame

Any ideas?

Sounds like Renrem isn't working correctly. Do you have Allowremoteadmin turned on as well as the username and pass in the brenbot.cfg file?

Turns out I was using port:# instead of remotedadminport:#

I messed up.

Everything running now. So far so good.
