The day you've been waiting for is here. RenGuard, BlackHand Studios' anti-cheat software for C&C: Renegade, is available for public download.

We would also like to take this time to announce that we have added v00d00 to the team as a Security Consultant. He has a huge wealth of knowledge in securing applications and his input has been extremely valuable in closing holes in the program and finishing up the Win32 SSC where a former team member left off. Please welcome v00d00 to the team!

PLEASE READ THE FOLLOWING INFORMATION!

After you download and install RenGuard, LAUNCH RENEGADE LIKE YOU NORMALLY DO, whether you are GameSpy or a WOL user! RenGuard will intercept and verify you, then proceed as normal.

The first time you use RenGuard, you will see a Guide that gives you a quick overview of the usage of the program. Please take a moment to understand how RenGuard works.

Visit <http://www.renguard.com/downloads.php> to download the Client (for playing Renegade on the RenGuard network) or the SSC (Server Side Client, for hosting an FDS with RenGuard.

PLEASE ONLY VISIT RENGUARD.COM TO DOWNLOAD RENGUARD. Due to the nature of this application, do not trust any other download locations unless we specifically mention them on RenGuard.com. Do NOT take the risk of infecting your PC with an unauthorized imitation!

In closing, we appreciate your patience in this long process. RenGuard isn't done by any means... we do plan on upgrading and improving the software as time passes. We have established a support channel on the n00bstories IRC network.

Connect to [irc.n00bstories.com](irc://irc.n00bstories.com), channel #renguard_support. We are in that channel to answer any questions you might have. If you don't have an IRC client, visit <http://www.n00bstories.com/irc.php> and select the RenGuard_Support channel to be connected instantly via the Java Applet.

Thanks again for your patience, and we hope you enjoy playing cheat-free with RenGuard!

Just thought I should let everyone know

First release looks good and you can expect (as time permitts) more work on the client part by me.

Within the first hour of RenGuard's release, we already had 74 users and 27 servers on the RenGuard network.

A HUGE thanks to our beta testers for helping us work out all the pre-release bugs and thanks to the community for their awesome support. I can't wait to see how this grows!

^^ Restart your computer and run the installer again. It looks like something else you installed is conflicting with the setup dll.

[View Forum Message](#) <> [Reply to Message](#)

That is pretti cool. I might give renegade another chance (hopefully it will re-install without problems)

So, how many people do you think will be banned by the end of this week?

[View Forum Message](#) <> [Reply to Message](#)

Terminator 101So, how many people do you think will be banned by the end of this week?

Hopefully none. RenGuard does not ban you if you are cheating, it simply will not let you connect to a server if you are, so no reason for bans RenGuard does have ability to ban, but it is reserved for people who attack the system itself.

C4minerwtf?

I tried restarting my computer and am still getting this error. Anyone have any clue what this error message means and what I can do to fix it?

Thanks.

Renguard doesn't wanna work with me, lol.

I mean why can't it let me re-install it instead of making me have to ask how to do it?

It wont start up ever since I re-installed Renegade, I know why, I have to re-install RenGuard, but yet it wont let me.

Post in my topic to help please.
