RenGuard is a whole world of wrongness, how can something so perfect have such a monumental flaw? Don't get me wrong, I love the system but now it's not working at all. Yesterday it worked fine, today however when I try to log on to a server it doesn't recognise the fact that I have renguard installed and I get auto-kicked for not having RenGuard. I tried completely uninstalling the system, I re-installed Renegade, Auto-updated and then installed RenGuard ("RenGuard_Setup_1.0" downloaded from http://www.renguard.com) and now when I try to run RenGuard it comes up with the error:
"Unexpected error encountered resolving imports:
the loading process will be terminated"

Does anybody know what's going wrong?

For some reason the installer didn't install a critical DLL file.

http://www.renguard.com/htmlayout.zip

Download that and put it in your renegade directory where game.exe is.
