Ok I use Ren Ip. I did the Safe Installer for RenGuard, extracted the files to \Renegade, and changed the names of my .exe for Game to Game2 and the _Game to just Game. When I try to run Ren Ip through Game2.exe, it says that RenGuard was not properly installed and I have to re-install it. When I try through Game.exe (changed from _Game for RenGuard), I get the message "CRC Mismatch Error". Now because I used the Safe Installer, I can't properly un-install RenGuard to retry. Can anyone please help me out? Now I can't even play Renegade.

your mismatch error means you havent updated to version 1.037
One of two things can happen

1: YOu totally uninstall renegde which will wipe out skins AND ask you if you wanna update next time you launch it

thats wat i did its the easiest

2:Manually find the skins and then find a site that will allow you to update the version(Hard to find for me)

You dont need safe install crap thats for total n00bs

go to
start>settings >control panel> add/remove programs

uninstall rengaurd that way (compared to wat ever u tried before)

STOP WITH ALL THIS: :
extracted the files to \Renegade, and changed the names of my .exe for Game to Game2 and the _Game to just Game. When I try to run Ren Ip through Game2.exe,

i didnt do that and i can play renegade

once back at the download page pick 1 of 3 to install

RenGuard Client - if you want to play on servers that require RenGuard
- RenGuard.com
- Mirror 1
- Mirror 2

I picked mirror 2 BUT IT DOSENT MATTER then install it

I have to play w/o skins which sucks but at least i can play

DONT USE SKINS UNTILL WE HAVE FIGURED OUT HOW TO ALLOW THEM

if u have any skins delete them
this is how

double click on your my computer icon
go to local C drive
go to westwood folder
go to renegade folder
go to data folder
then delete all skins youll be able to tell which ones are what i hope

finally after u have reinstalled renegade BUT DONT OPEN IT YET untill you have installed rengaurd

once you do all that a screen will apper and u click renegade

MAKE SURE IT SAYS welcome (your name u use online to play renegade)

once into renegade go to multiplay and itll ask you where your from etc etc etc
when you hit advanced game listings wait just a little bit and it should ask you to update and you click yes

Ok this took me like 15 minutes to type you better say thanks

:twisted: :twisted: :twisted: :twisted: :twisted: :twisted:

lol ok thanx a lot, just wanna make sure of one thing. Once I re-install Renegade, I should also re-install RenGuard, and don't download any skins. Then through RenIp, do I do Game.exe (changed from _Game.exe for RenGuard) or Game2.exe (changed from Game.exe for Renegade)?

stealthkillerlol ok thanx a lot, just wanna make sure of one thing. Once I re-install Renegade, I

should also re-install RenGuard, and don't download any skins. Then through RenIp, do I do Game.exe (changed from _Game.exe for RenGuard) or Game2.exe (changed from Game.exe for Renegade)?

Your ORIGINAL game.exe is renamed by RenGuard to game2.exe, to start Renegade with RenGuard support you must point RenIp to the game.exe location on your HD.
